

Registering a personal iOS device

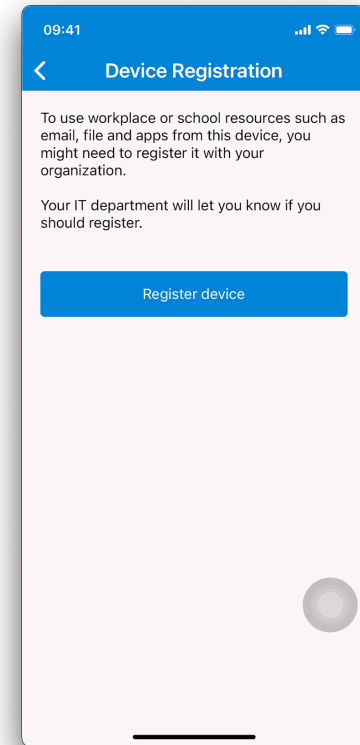

As per company policy, all personal devices must be registered into the WEHI domain to access company data.
Please use the following instructions to register your personal android device.

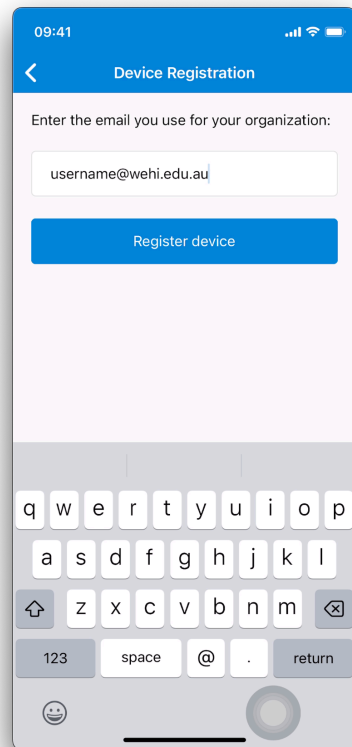

- 1) If you haven't already, download Microsoft Authenticator from the App Store and set it up using these instructions: <https://support.wehi.edu.au/a/solutions/articles/75000095281>

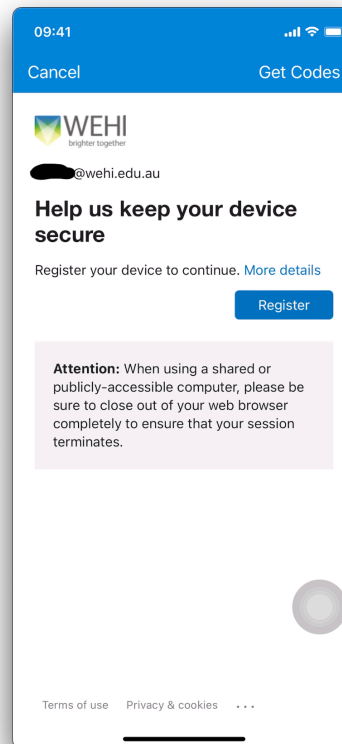

- 2) Tap the "burger" icon to open the Settings menu, scroll down and select *Device Registration* under *Work or school account*

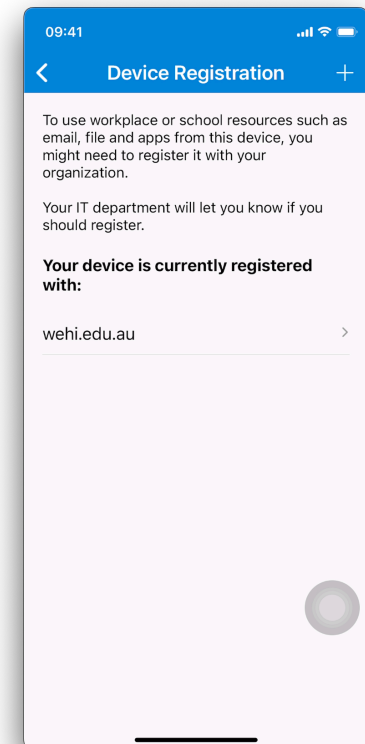

- 3) If you see the screen in slide 6 then you are already done, otherwise tap Register device entering the *Device Registration* menu, select *Register device*

- 4) You'll be prompted to sign into your organisation. Use your WEHI email and password to sign in.

- 5) After signing in, you'll be prompted to register your device. Click on *Register* to continue.

- 6) You'll then be returned to the device registration page, and be registered to the *wehi.edu.au* domain.

After doing this, you will be able to access WEHI company data using the Office 365 apps (e.g. Outlook, OneDrive and the Office suite).

Please note that iOS only supports the Web Browser version of these apps when using Microsoft Edge.
